* *Collector for PDA* is a data entry tool designed to download data to a full Collector Trauma Registry program. Interface software is included with the installation package and requires minimal additional hard disk space on the server. The Collector Trauma Registry - *Standard* version PDA software is currently available for use with a Palm OS® device, and for use with a Windows 2000 or later OS. Contact DI sales and marketing for information regarding PDA software for other custom Collector versions.

** *Compatible System Environments* - Collector products can also be run over several client/server systems such as Citrix, MS Terminal Services, and web-based systems.
